

California isn't building enough housing to meet jobs and population growth, and what housing is getting built is happening too much in sprawl areas on greenfields. While this greenfield-focused development may please [pro-sprawl conservatives](#), it will worsen traffic and air pollution and keep the state from meeting its long-term environmental goals.

To discuss where and what type of housing the state should be encouraging, please join me for an upcoming Berkeley Law [webinar](#) on May 17th from 11am to noon. We'll also discuss the recent report [Right Type, Right Place](#), which is the first academic, comprehensive evaluation of the potential economic and environmental impacts of infill housing development — compact housing in already urbanized land near transit, jobs and services — on California's 2030 climate goals under Senate Bill 32 (Pavley).

The report was authored by UC Berkeley Law's Center for Law, Energy and the Environment (CLEE) and the [Turner Center for Housing Innovation](#) at UC Berkeley and commissioned by [Next 10](#).

In addition to me, the webinar will feature:

- **Nat Decker**, researcher at the Turner Center for Housing Innovation at UC Berkeley
- **Colleen Kredell**, Director of Research, Next 10

Registration is [now open](#). Please tune in and send us your questions!
