Berkeley, like UCLA, is on the forefront of research on climate change and energy policy. There's a lot going on here — ranging from breakthroughs in climate modeling to new energy technologies to improved analysis of economic impacts. It's hard, even for those of us on the campus, to keep track of all of these developments.

A new website, Cal Energy and Climate, provides a roadmap and details about the work of individual faculty members and programs across campus. Check it out!
